Remote desktop connection

ده Software بيتيح ليك الإتصال و التحكم في جهاز أخر عن بعد أكنك قاعد قدامه.

أستخداماته:-

1. الوصول لجهازك من أي مكان والتحكم فيه
2. مسؤولين ال IT بيستخدموه لمراقبة وحل مشاكل الأجهزة عن بعد.
3. Server management: تدير السيرفرات من غير ما تكون في نفس المكان.
4. تشغيل البرامج أو نسخ الملفات عن بعد.

What you need to use it?

On the host device:-
1. Windows pro OR Enterprise.
2. Activate the Remote desktop: Sittings – System – Remote desktop – Enable Remote Desktop
3. Name or IP of the device
4. Your device has stable and strong Internet Connection.
5. Have the username and password of the device account.

On the client side:-

1. Has the remote desktop software you can use the existing one on windows
2. On other operating systems you can use Microsoft Remote Desktop.
3. Good Internet Connection.

Mapping many to many unary relation

Actually it's not different from many to many binary relation we make another table to store two foreign keys.

Example: We have number of employees that supervise another employees

So we have employee Id and supervisor Id We put them on table

Supervision (FK – emp_ID, FK – supervisor_ID) and both refer to the employee table.
